PROFILE SUMMARY:

- Working as **Linux Administrator** 2+ years of experience in **Linux and AWS**
- Hands on experience in **Linux ,EC2, VPC, Subnets, Routing tables, Internet gateways,IAM,S3,ELB, Security Groups, Cloud Watch, SNS, EBS , Auto Scaling and Load Balancing .**

Linux and Windows:

- Installing, configuring and maintaining the Linux servers.
- Troubleshooting the Network Problems and service problems.
- Writing and modifying scripts for application deployments as well as system monitoring.
- Writing the Automation script for server installation by using shell script.
- Experience in Job scheduling and Links.
- Experience, working on Linux & Windows based platforms
- Installing the Linux Operating systems Ubuntu, CentOS, Debian and Redhat.
- Working on files, Directories, Users and Group Management.
- Managing user and file permissions.
- Installing Different software packages required to Developers. Knowledge on Web Servers and Application servers like **Apache, Tomcat.**
- Working on Filters and file compressing and extracting.
- Create new users, resetting user passwords, Lock/unlock user accounts.
- Create a backup and recover the data.
- Maintaining the Asset Management and HR Portal.
- Monitoring system performance by using zabbix and troubleshooting Network issues.

AWS:

- Launching the Amazon EC2 Cloud Servers using **AMI's** (Linux and windows) and configuring the servers for specified applications.
- Create AMI images of critical EC2 instances as backup if **key-pair lost**.
- Created **EBS volumes** for storing application files for EC2 instances whenever they are mounted to them.
- Creating/Managing the **AMI/Snapshots/Volumes**, Upgrade/downgrade AWS resources (CPU, Memory, EBS).
- Experienced in creating multiple **VPC's** and public, private subnets as per requirement and distributed them as groups into various availability zones of the VPC.
- Created **NAT gateways** and instances to allow communication from the private instances to the internet through bastion hosts.
- **IAM** for creating roles, users, groups and also implemented **MFA** to provide additional security to AWS account and its resources.
- Hands-on experience SQL Server Management Studio
- Created topics in **SNS** to send notifications to subscribers as per the requirement.
- **Cloud Front** setup for Low latency for fast loading website/web contents experience
- **S3** provides highly durable and secure places for backing up and archiving the data.
- Configured **S3 buckets** with various life cycle policies to archive the infrequently accessed data to storage classes based on requirement.
- Created and configured **Elastic load balancers** and **auto scaling** groups to distribute the traffic and to have a cost efficient, fault tolerant and highly available environment.
- Maintained the monitoring and alerting of production and corporate servers using **Cloud Watch** service.
- Hands on experience in installing, configuring and maintaining web servers like **Apache httpd** , Application servers like **Tomcat**.

PROJECT :

Company	AJR Info Systems Pvt Ltd, 14-May-2020 to 30-June-2020
Designation	Linux Administrator
Project Name	Banter VOIP Technology
Technologies	Free switch, Kamailio, Fail2ban, FusionPBX
Environment	EC2, EBS, VPC, ELB, RDS, SNS, S3, Cloud watch and IAM Security

Roles and Responsibilities:

- Experience, working on Linux & Windows based platforms
- Installing the Linux Operating systems Ubuntu, Centos, Debian and Redhat.
- Working on files, Directories, Users and Group Management.
- Installing Different software packages required to Developers.
- Hands on Experience in Web Servers and Application servers like **Apache, Tomcat**.
- Working on Filters and file compressing and extracting.
- Create new users, resetting user passwords, Lock/unlock user accounts in Active Directory.
- Monitoring system performance by using zabbix and troubleshooting Network issues.
- Launching the Amazon EC2 Cloud Servers using **AMI's** (Linux and windows) and configuring the servers for specified applications.
- Create AMI images of critical EC2 instances as backup if **key-pair lost**.
- Created **EBS volumes** for storing application files for EC2 instances whenever they are mounted to them.
- Creating/Managing the **AMI/Snapshots/Volumes**, Upgrade/downgrade AWS resources (CPU, Memory, EBS).
- Experienced in creating multiple **VPC's** and public, private subnets as per requirement and distributed them as groups into various availability zones of the VPC.
- Created **NAT gateways** and instances to allow communication from the private instances to the internet through bastion hosts.
- **IAM** for creating roles, users, groups and also implemented **MFA** to provide additional security to AWS account and resources.
